

Devansh

Bangalore, Karnataka, India | devanshabrol1503@gmail.com | +91-8558906689

linkedin.com/in/devansh-abrol | github.com/devansh1503

Skills

Programming Languages: Java, Python, JavaScript

Backend: Spring Boot, Django, FastAPI

Frontend: React.js, Next.js, React Native

Databases & Messaging: SQL, MongoDB, Redis, Elasticsearch, Kafka

Cloud & DevOps: AWS (EC2, S3, RDS), Docker, Linux

AI / GenAI: OpenAI API, Google Gemini API, LangChain, Qdrant, FAISS

Experience

Software Engineer, Onsite Electro Services – Bangalore, Karnataka Aug 2024 – Present

- Engineered an **LLM-based** document Q&A chatbot using **Gemini API**, achieving **<1s semantic search** latency over 1K documents resulting in automation of over **70% of customer queries**.
- Restructured report export pipeline using **Redis-queued** async processing and **S3 storage**, eliminating timeouts and improving stability under concurrent load (**100+ exports/day**).
- Constructed a real-time and scheduled **data sync service** using **Observer pattern** with **retry and logging** mechanisms, improving cross-system data consistency by nearly **95%**.
- Extended warehouse and transaction data models in **SQL with Spring ORM** to support bin-level inventory tracking, **ensuring backward compatibility**, and enabling scalable multi-bin operations.
- Reduced search latency from **5s to <200ms** across multiple APIs by introducing **Redis-backed indexing** and pagination over **700K** searchable records.

Software Engineer Intern, Onsite Electro Services – Bangalore, Karnataka June 2023 – July 2024

- Built a **Spring Boot validation API** using **fuzzy matching** to close a form-input loophole, reducing fraud cases from **40+ per day to near zero** through logging and rule refinement.
- Developed an **asynchronous email service** using **Mandrill API** with **queue-based processing and logging**, enabling automated reports and notifications delivery.

Projects

Distributed Search Engine powered by AI GitHub Demo

- Engineered a distributed search engine using **Spring Boot, Kafka, Redis, and Elasticsearch** with an **event-driven crawling and indexing pipeline** for scalable data processing.
- Designed a hybrid ranking system (**BM25 + vector + PageRank**) using **FAISS and Ollama**, improving relevance beyond keyword-based search.
- Developed a **RAG-based query pipeline** using **embeddings and OpenAI API** with caching and autocomplete, enabling **low-latency semantic search**.

Distributed Remote Code Execution Engine GitHub Demo

- Built a remote code execution engine using **Spring Boot, Redis, and Docker** with a **queue-based async job processing** system.
- Implemented **secure containerized execution** for multi-language support (**Python, Java, C++ , JavaScript**) with output capture and timeout handling.
- Designed a **Redis-backed job pipeline** for tracking, scheduling, and **scalable execution of code jobs**.

Education

Chitkara University, BE in Computer Science

Aug 2020 – Aug 2024

- CGPA: 9.62/10.0
